Utility Pole Tag Holders

Fact Sheet

*Not all styles and options shown

**Holder and tags sold separately

There are millions of utility poles across the United States, and each one is marked to identify the companies that have utility lines associated with that pole. The poles themselves each have a unique identifier. A pole tag holder can be used to hold aluminum or polyethylene pole tags with the letters and numbers making up these identification codes which denote geographic location, route or circuit number, utility pole ID number, state, township, serial number and more.

Utility pole tag holders come in a variety of sizes to accommodate various applications. They can be mounted horizontally or vertically and can hold anywhere from one to twelve alphanumeric pole tags.
